Summary

I am Quang Minh Pho, a seasoned software engineer with a focus on optimizing CI/CD processes in high-tech industries. My expertise spans cloud platforms like **Azure**, alongside software development and CI/CD platforms such as **Azure DevOps** and **GitHub Enterprise**. I leverage technologies like **Docker** and **Kubernetes** to modernize and migrate legacy systems, ensuring scalability and efficiency. My adaptability across various programming languages, including **Go**, **C#**, and **TypeScript**, complements my deep proficiency in **Python** and automation tools like **Ansible**. Over time, my focus has evolved from software development to streamlining software delivery pipelines, driving seamless integration, and maximizing value for customers.

About me

My journey as a software engineer began with a desire to understand the intricacies of software development. The thrill of seeing various components harmoniously come together fueled my passion. As my career evolved, my curiosity extended beyond the code: "What happens after hitting 'compile'? How does my software interact with the broader system? How does it deliver value to customers?"

I discovered that my true interest lies in the processes leading to these outcomes. This realization led me to transition into a DevOps engineer role, allowing me to focus on what I love most: continuously refining the software delivery process to connect every aspect and deliver customer value.

In my professional life, I enjoy automating tasks and making constant improvements. Even in my free time, I continue to streamline our home automation system. With my wife as the stakeholder, it's essential that these systems are both reliable and easy to use.

Certifications

Microsoft Certified: AZ-900 Azure Fundamentals - Microsoft

Microsoft Certified: AZ-204 Azure Developer Associate – Microsoft

Microsoft Certified: AZ-400 DevOps Engineer Expert - Microsoft

ISTQB Foundation Level - ISTQB® - International Software Testing Qualifications Board

Experience

Cryptography Security Specialist/DevSecOps Engineer

ASML

Oct 2024 – Now

- ❖ Designed and contributed to the infrastructure architecture of a new PKI solution, ensuring security, scalability, and compliance.
- ❖ Delivered and service a working solution under tight time constraints to provide cryptographic capabilities to Azure workloads via Azure Managed HSM, streamlining security operations.
- ❖ Defined an improvement plan to enhance existing key custodianship practices for both PKI and HSM systems, strengthening security controls and operational efficiency.

Rabobank

Lead DevOps Engineer/DevSecOps Engineer

Rabobank

May 2023 – Sep 2024

- ❖ Lead the DevOps vision for a security-focused team, steering a group of 15 engineers and directly training a sub-team of 6 on DevOps concepts and implementations (**Git, CI/CD, GitOps, IaC**).
- ❖ Investigated and redesigned existing security-focused processes to introduce automation opportunities, architecting new infrastructure to support these improvements.
- ❖ Delivered a Proof of Concept (PoC) that reduced the SLA for a key process from 10 days to less than 1 hour, gaining buy-in from both the team and management for the DevOps vision.
- ❖ Advocated and introduced key practices, including Git, Infrastructure as Code (IaC), and GitOps, significantly transforming the operational workflows.
- ❖ Conducted side projects to perform and optimize loads for target **Hardware Security Module (HSM)** systems.
- ❖ Utilized a wide range of Azure services (e.g., **Data Factory, App Service, AKS, ACI, ACR, Functions, Load Testing, Monitor, Log Analytics**) using **Bicep**.
- ❖ Developed and fully tested two **Python** console applications based on PoCs, automating key processes and delivering production-ready code that enhances efficiency and security compliance.

Software Engineer/DevOps Platform Engineer

ASML

Jul 2022 – Mar 2023

- ❖ Developed infrastructure installation and packaging CLI tools in **Python** and **Go**.
- ❖ Enhanced CI/CD capabilities by migrating from **Bitbucket** to **Azure DevOps**.
- ❖ Refactored legacy **Ansible** automation scripts with Python-based custom modules to improve testability.

- ❖ Containerized the development environment using **Docker** and **Terraform** for stability and consistency.
- ❖ Introduced infrastructure tests to improve platform reliability.
- ❖ Advocated for and implemented **Test-Driven Development** (TDD) to align with Agile practices.

Software Engineer/DevOps Engineer

ASML

Jun 2021 – Jun 2022

- ❖ Implemented Docker-based **GitHub Actions** runners in **Kubernetes**, managed via **Helm** and **Rancher**.
- ❖ Developed **GitHub Actions** workflows to automate operational tasks, serving as best practice examples for 1500+ developers.
- ❖ Established the GitHub Community of Practice to promote automation through GitHub Actions.
- ❖ Provided **Python** expertise and developed automation for runner provisioning using **Ansible** and **Python**.
- ❖ Promoted **Test-Driven Development** (TDD) and created functional tests for infrastructure.

Software Engineer/DevOps Engineer

Philips Healthcare

Mar 2019 – May 2021

- ❖ Migrated CI/CD and SCM from **Jenkins & RTC** to **Azure DevOps & Git**.
- ❖ Redesigned CI pipelines, creating modular automation interfaces to accommodate team-specific needs.
- ❖ Developed an API solution for continuous integration and SCM build dashboards, eliminating manual processes.
- ❖ Created a client-service API for continuous delivery to production systems using **Python Flask** and **.NET Core**.
- ❖ Defined best practices for Python-based application development and served as the Python subject matter expert.
- ❖ Laid the groundwork for migrating from physical to virtual build systems using Ansible.

Software Engineer/Test Automation Engineer

ASML

ASML (via Altran)

May 2017 – Dec 2018

- ❖ Developed a widely used test automation framework in **Python**, crucial for the software release qualification process.
- ❖ Maintained source code for virtual software simulation systems, supporting integrated testing efforts.
- ❖ Troubleshoot and supported test systems, identifying root causes of instability and coordinating resolutions.

Software Engineer

ASML

ASML (via Altran)

April 2016 – Dec 2016

- ❖ Analyzed design specifications, addressed concerns with software architects, and implemented software in **C++**.
- ❖ Designed and executed test cases to ensure high-quality deliverables, utilizing **Google Mock**.

Education

Fontys University of Applied Sciences

Bachelor of Applied Science (BASc), Information and Communication Technology 2011 - 2015
